

# CIVIL ENGINEERING CALCULATOR

## Box Culvert - Calculation Report

Generated: 06 Jul 2026, 22:08

### INPUT SPECIFICATIONS

|                  |                                                       |
|------------------|-------------------------------------------------------|
| Dimensions:      | Outer: 2.0x2.0, a x b: 1.5x1.5, Length: 10.0 (x1.0) m |
| Mix Ratio:       | 1.0:1.5:3.0                                           |
| Dry Factor:      | 1.54                                                  |
| Bag Weight / WC: | 50.0 kg / 0.5                                         |
| Rates /unit:     | C:0.0, S:0.0, A:0.0, Conc:0.0                         |

### CALCULATION RESULTS

| Item             | Quantity  | Unit  |
|------------------|-----------|-------|
| Concrete Volume  | 17.500    | m³    |
| Dry Volume       | 26.950    | m³    |
| Cement Bags      | 141.12    | bags  |
| Sand Volume      | 7.350     | m³    |
| Aggregate Volume | 14.700    | m³    |
| Water Needed     | 3528.000  | Liter |
| Structure Weight | 42000.000 | kg    |

### COST ESTIMATION

|                      |      |    |
|----------------------|------|----|
| Cement Cost          | 0.00 | \$ |
| Sand Cost            | 0.00 | \$ |
| Aggregate Cost       | 0.00 | \$ |
| Concrete Cost        | 0.00 | \$ |
| TOTAL ESTIMATED COST | 0.00 | \$ |
